

Müller drums keep the economy running

Müller Packaging supplies the processing industries, which use the drums to temporarily store and transport raw materials and finished products.

By Marina Bräm, information designer from Chur, who publishes regularly in collaboration with companies, institutions, universities and cantons.

1 Production

A drum is made of a body and two parts stamped from steel coils, a bottom and a top. Bottom and top are joined by seaming with the body.

Then, the drum is painted and configured according to customer requirements.

There are also drums equipped with a removable top lid instead of a fixed top.

2 Inspection and control

- Certified production**
- Quality management according to ISO 9001
 - Environmental management according to ISO 14001
 - Occupational safety according to ISO 45001
 - Food Safety System certification FSSC 22000

- Quality inspections**
- Safety:** Check of the specifications of the UN certification
- Hygiene:** Purity tests and microbiological tests

3 Protection and safety

The industrial drum protects the transported goods against environmental influences and the environment against its hazardous contents.

The drums offer protection for every imminent danger, also in the event of an increasing internal pressure (A) or a fall from height (B).

4 Müller Packaging's products

UN-approved packagings for liquid and solid hazardous goods. Tight-head, composite and open-head drums in various versions and sizes.

- Semiconductors**
- TV sets
